Made in Germany

IJEFF Compliant

PSE 300 VS

Fully automatic single chamber PowerSpray®-system with 2step process (cleaning / rinsing, drying)

Cleans Screens, stencils, solder carriers, misprints from SMD paste, flux, oil, dust, grease

Capacity: Screens, stencils, frames and carriers up to a size of 780 x 950 mm (31" x 37,5")

Part number: 0905PSE3VS

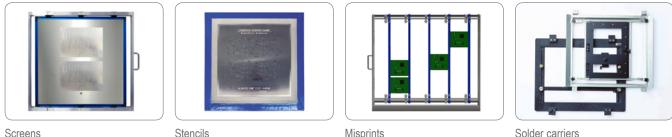

Certifications:

This water free operating system was certified in its basic version for its energy saving processing and for the standard integration of comprehensive safety features.

- Compact system with two circuits and two tank function
- Waterless / independent, no water / waste water connection necessary
- Comfortable push one button operation
- □ Fully automatic 2step process: cleaning / rinsing, drying with CWA[®]-supercharger compression drying
- Vertical rotor system with two asynchronous spray rotors for thorough wetting (no blind spots)
- Process and service intervals PLC controlled
- Process sections made of electrolysis and high temperature resistant elements
- Safe installation close to the production line possible: no special protection required
- Extremely compact maximum capacity on a very small footprint

Key applications

Screens

Misprints

Solder carriers

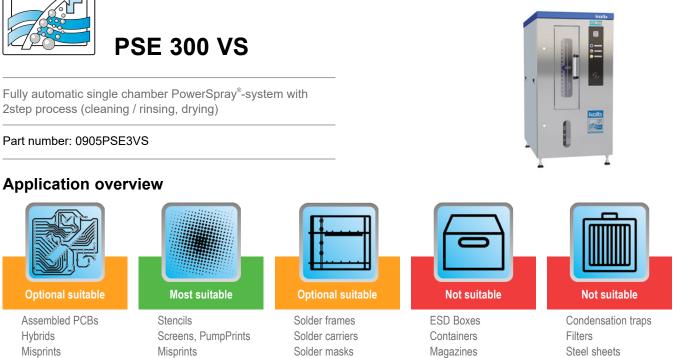

kolb PSE 300 VS is an extremely compact first-rate performance PowerSpray® system designed and manufactured in Germany for smaller quantities with very short cycle times due to an intelligent 2step process with patented high performance supercharger drying.

PS 300E VS delivers best possible cleaning of screens, stencils, misprints and solder frames, today a prerequisite for reproducible quality in production, the reduction of expensive production stand-stills and as well for high customer satisfaction.

The cleaning system can be operated with all common electronics cleaning supplies (detergents / chemistry, etc.) which are approved by the manufacturer.

Made in Germany

Optional suitable applications can also be optimally realized with the appropriate options.

Cleaning / rinsing (key process 1): From the system tank a communicating cleaning and rinsing liquid is sucked by a magnetically coupled pump unit and routed with a controllable volume flow into the ASYNCHRO[®] spray rotors with patented PUSHFORCE[®] nozzles. Their geometry ensures a comprehensive and thorough cleaning, even in inaccessible and critical aereas. The liquid is continuously filtered in circulation, so that the system progressively enters the rinsing process after removing the contamination.

Drying (key process 2): The purified products are dried with the patented CWA[®] (Compressed Warm Air) technology. The built-in special compressor compresses the ambient air. At the same time it collects the kinetic energy (frictional heat) of the paddle wheel in the unit, then presses the heated and compressed air into the rotor nozzles which were already used for cleaning and rinsing. There it blows off (pressure) and evaporates (heat) the residual moisture. This method is energetically and constructively highly efficient, as it uses the "waste heat" of the compressor rotation and the compressed air as driving power for the rotors. In addition, a system equipped with CWA[®] technology requires no additional hardware and no external compressed air connection for the MediumWipe[®] process.

Cycle time: < 18 min., depending on contamination and detergent

Maintenance: The system has a large maintenance door on the right side. In the maintenance area among others the pumpout set is available. Tank levels as well as pressure values and maintenance cycles are monitored by the PLC. The tank level is also easily controllable through a window in the system front.

Made in Germany

PSE 300 VS

Fully automatic single chamber PowerSpray[®]-system with 2step process (cleaning / rinsing, drying)

Part number: 0905PSE3VS

Main	standard	features	

	PowerSpray [®] technology bundle: magnetically coupled pump unit, twofold ASYNCHRO [®] volume-spray rotorsysterm with PUSHFORCE [®] nozzles, "Option101" softwareprogram (101 freely selectable programs)
	Magnetic coupled pump unit
	Siemens LOGO Programmable Logic Controller (PLC)
	Full flow coarse filter (process chamber)
	CWA [®] -supercharger compression drying
	ClosedLoop reprocessing of cleaning and rinsing fluid
	Safety features: safety interlock on the process chamber door, overflow alarm for all tank sections, overheating protection for all heating and drying elements, end switches for all motor-driven valves and drives, personnel protection insulation
	Front cover made of stainless steel, side and rear covers in painted steel
	Process sections made of electrolysis resistant elements
М	ain options
	Cascaded filter system
	Drip & storage reservoir
	Exhaust unit
	Full stainless steel housing
	Noise insulation

□ Sediment filter for cleaning / rinsing tank

Technical data

kolb PowerSpray [®]
Screens, stencils, frames, carriers up to 80 x 950 mm (31" x 37,5")
W 350 = D 980 = H 920 mm
ca. 75 - 100 I I
400 V AC, 16 A CEE / 3PH / 50 or 60 HZ
ca. 3 kW
PLC (Siemens LOGO)
up to 55 °C
up to three stage - 1. Full flow coarse filter < 2 mm, 2. Sediment filter inside the tank, 3. 20" fine filter (1 - 100 μ m - process dependent)
Ø 160 mm, exhaust capacity 200 to 300 m³ / h
800 x 1.200 mm
75 dB (A)
330 kg
